ALGAE

- Algae are eukaryotic, ubiquitous organisms.
- Cell wall is thick and rigid and uni or multicellular.
- They reproduced by both sexually and asexually.
- Disease is called Red rust

1.0 INTRODUCTION

The objectives of this experiment are to define parasitism, saprobes, mutualism, geotropism, hypha, mycelium, multicelled, sporangium, rhizoid, zygotangium, ascus, conidium, ascogonium, basidium, basidiospore, basidiocarp, dikaryon and mycelotheca. Other than that is to recognize representative of the major phyla of fungi in their proper phyla list means to place various representatives of the fungi in their proper phyla list means why fungi are important. Besides objectives of this experiment are to identify various structures associated with sexual and asexual reproduction described, identify the structure of fungi examined and determined the structure of fungi on certain species of fungi.

2.0 MATERIALS

- 2.1 Compound Microscope
- 2.2 Slides of fungus:
 - Phylum Zygomycota
 - Rhizopus nigricans
 - Oosporangium
 - Phylum Ascomycota (Six fungi)
 - Aspergillus
 - Endoglyphaceae
 - Phylum Basidiomycota (Chili fungi)
 - Cyrtophorus
 - Agaricus
 - Puccinia maritima
 - Marasmius
 - Lactaria Thelma

Using adhesive roots, the bladder presses on the stem of the host plant with a haustorium, an absorptive organ within the vascular tissue of the host plant. Discover Discoblog magazine. Hydnora spp. Once the plant is germinated, it has 6 days to find and establish a connection with its host plant before its resources are exhausted. [9] The onesFrom the bladder they germinate on the ground, then the plant sent stems in search of its host plant reaching up to 6 cm before dying. 2007. 2007.
